PROFESSIONAL SUMMARY

Full Stack Developer with 4+ years building React and Node.js applications across the full development lifecycle, including requirement gathering, design, testing, deployment, and post-deployment support. Skilled in RESTful API development, build automation (Gulp.js), and automated testing (Jasmine, Karma, Cypress), collaborating with cross-functional Agile teams and owning freelance deliverables independently.

SKILLS

Frontend Development: React, TypeScript, JavaScript (ES6+), HTML5, CSS3

Backend & APIs: Node.js, Express, REST API design & development

Databases: MySQL, MongoDB

Testing: Jasmine, Karma, Cypress (E2E), unit testing

Development: Git, GitLab, Perforce, Jenkins, Gulp.js, npm scripts, CI/CD, Agile/Scrum, AWS

PROFESSIONAL EXPERIENCE

Freelance Full Stack Developer (Contract), Self-Employed / Freelance — May 2026 - Sep 2026

- Architected and delivered the full-stack app as sole engineer — React front-ends, Node.js/Express API layer
- Leveraged Antigravity for agentic development, speeding up delivery within the 3-month timeline

Sr. Software Engineer Level III, Indapp Software Solutions — Oct 2025 - Aug 2026 · Kochi, India

- Improved component load time by 20% by refactoring legacy code for modularity and scalability, using Git-based workflows and Visual Studio Code.
- Led design and development of 5+ feature modules for a React-based admin panel, shipping 8+ enhancements per sprint using reusable, production-ready React components.
- Built reusable React components using Hooks and component-driven architecture for scalable, maintainable UI.
- Integrated RESTful APIs into React views, handling async data, loading/error states, and dynamic UI updates.
- Reduced reported UI issues by 35% through structured refactoring, component reuse, and validation.
- Improved component load time by 20% through React performance optimization and modular code, using Git-based workflows and Visual Studio code

Senior Software Engineer, Quest Global — May 2022 - Sep 2025 · Trivandrum, India

- Built full-stack features using React and Node.js across two enterprise products (CSD,SmartConnect), collaborating with cross-functional teams to gather requirements and Deliver solutions
- integrated 10+ RESTful APIs into React components with reusable service layers for async data handling and dynamic UI updates; managed CI/CD with Perforce, Git, and Jenkins.
- Built reusable React components using Hooks, props, and state management patterns to improve scalability and maintainability across enterprise modules
- Automated build and task workflows using Gulp.js, streamlining the development and pre-deployment pipeline

- Built an automated testing platform: Jasmine/Karma unit tests (80%+ coverage) and Cypress E2E suite (30+) flows), cutting regression testin
- Deployed and hosted React applications on AWS, using EC2 for application/server hosting and S3 for static asset and file storage, supporting reliable delivery across environments
- Diagnosed and resolved 20+ complex front-end and production issues across react components and environments.
- Implemented 15+ UI enhancements per quarter, reducing front-end bug backlog by 25%.
- Optimized React components with lazy loading and code splitting, reducing initial page load time by 30%.
- Contributed to Agile ceremonies - stand-ups, sprint planning, retrospective across 3 week sprints.

PROJECTS

DevTinder · React, Node.js, Antigravity

- A Tinder-like connection platform that displays user profiles as cards,enabling users to send and receive connection requests, connect with other users,and chat with their connection

Admin Panel for Indapp · RESTful Integrations, React, Node.js

- Developed and enhanced a scalable web-based administration portal for managing users, businesses, products, volunteers, subscriptions, and multilingual content. Implemented responsive UI components, integrated RESTful APIs, optimized application performance, and maintained reusable component architecture while collaborating with backend teams to deliver new business features and improve existing workflows.

Custom Service Desktop · React, Node.js, Express.js

- Framework for developing a service desktop application used by field engineers to troubleshoot,diagnose and monitor scanner machines.

EDUCATION

B.Tech, Computer Science (CGPA 7.3), Marian Engineering College Aug 2016 - May 2020

CERTIFICATIONS

Namaste Node.Js, NamasteDev
